

CUSTOMER TRAINING AND WORKSHOPS

ISO 14001: Internal Auditing of an Environmental Management System

Workshop overview

This two-day workshop focuses on ways to continuously improve environmental performance, while decreasing the cost of waste management and how to conduct an internal audit under the ISO 14001 guidelines. This workshop will prepare an auditor to assess whether or not a company is complying with ISO 14001 regulations. This includes the process that an auditor should follow, the questions an auditor should ask and the possible points of failure.

Learning outcomes

- Identify characteristics that an effective auditor should possess
- Define ISO 14001 terminology
- Describe the relationship ISO 14001 has to legal requirements
- Explain the steps in the process approach
- Identify the audit activities in each phase of the audit process
- Identify sources of information for collecting and verifying audit information
- Discuss the components of effective interviewing
- Describe the components of an effective finding
- Identify common pitfalls associated with auditing
- Identify the Environmental Management Systems (EMS) issues and the ISO 14001 clauses related these EMS issues
- Apply effective audit techniques

Who should attend

- Regulatory compliance engineers
- Product safety engineers
- Decision makers in product design, manufacturing, and marketing
- Sales and marketing professionals involved in exporting

Private workshops

Private workshops offer a cost-effective solution for bringing expert instruction to you and your staff. If your organization plans to send five or more individuals to a public workshop, you may want to consider letting us come to you. Because these programs are private, we can tailor the content to suit your specific business needs.
